

Amendments to the Specification

Please replace the title as follows:

MICROCHIP CONTROLLER BOARD

Please replace the paragraph beginning on page 6, line 9, with the following rewritten paragraph:

A similar method can be applied in case where a pattern 63 intersects wiring comprising the pads 4-2 and 5-2. In such a case, the pads 4-2 and 5-2 may be connected with a jumper terminal 61. It is well known for the jumper terminal or the like to be used in the printed wiring board, but the jumper terminal of the present invention, wherein the programming terminal of the microchip controller 1 is disconnected during programming, has never been applied. Accordingly, the pattern design can be more freely performed by applying the programming terminal of the above.
